

The Certified Safety Professional (CSP) credential is the mark of the safety professional. Like the Professional Engineer designation for engineers or the Certified Public Accountant designation for accountants, the CSP certification marks individuals who have met educational and experience standards and passed rigorous examinations validated against the practice of hundreds of safety professionals.

- No other safety certification holds the same level of demand by employers and government agencies.
- No other safety credential has the same impact on salary.

In the past twenty years, the responsibilities of safety professionals have expanded. Safety issues have become more complex and today's safety professionals must be continually better qualified. CSPs are among the most highly trained, educated, and experienced in the safety field. In general, those who hold the CSP credential are more likely to be hired, earn higher salaries, and receive more promotions and leadership assignments than their peers who do not hold the certification.
